

Social Stays

Website Requirements Brief — for Website Designer / Developer

Issued: 4 Oct 2026

Budget: ₹ []

Target launch: [] / [] / 2026

Contact: [Name] · +91 []

1. Project overview

- **Brand:** Social Stays — a curated collection of private villas & farmhouses around Indore (Jaam Gate, Mandu, Omkareshwar, Ujjain), hosted by owner families.
- **Audience:** families, friend groups and celebration bookers from Indore / MP; mostly arriving on **mobile** from Instagram, Meta ads and Google search.
- **Primary goal:** drive **WhatsApp enquiries** (no online booking/payment in Phase 1). Secondary: capture villa-owner partnership leads.
- **Reference:** HTML mockup provided (social-stays-mockup.html) — use as the layout & content direction, not a pixel-final design.

2. Brand & design direction

- **Look:** luxury-minimal, photo-led, lots of white space. Must feel premium yet warm — comparable to StayVista / SaffronStays, not a budget listing site.
- **Palette:** White #FFFFFF · Beige #F6F0E5 / #EDE3D1 · Gold (text & buttons) #8A6B24 · Gold (accents) #B8944A · Ink #2A241B.
- **Fonts:** Cormorant Garamond (headings) + Manrope (body) — Google Fonts. Logo to be designed / refined by designer (simple gold monogram + wordmark).
- Gold text on white must stay readable (WCAG AA contrast). No gradients, emoji or template-looking stock icons.

3. Pages / sitemap

Page	Key content
Home	Hero photo + enquiry bar, highlights, destinations, villa collection, experiences, how booking works, reviews, FAQ, owner CTA
Villas (listing)	All villas with filters: destination, guests, private pool, pet-friendly; “from ₹ / night” price on each card
Villa detail (template)	Gallery + lightbox, description, bedrooms/guests/baths, amenities, house rules, check-in/out, cancellation, map, sticky WhatsApp enquiry card
Destinations (×4)	Short guide per location: drive time, things to do, villas available there (SEO landing pages)
Experiences	Add-ons: meals/thali, bonfire, celebration décor, BBQ dinners — with indicative prices
Celebrations / Occasions	Birthdays, anniversaries, pre-wedding, small offsites — enquiry-focused landing page
For villa owners	Benefits, how partnership works, lead form (name, location, rooms, photos link)
About · FAQ · Contact	Story, team, FAQs, WhatsApp/phone/email, Google Map
Policies	Terms, cancellation & refund, privacy policy

4. Functional requirements

- **WhatsApp enquiry flow:** form (destination, dates, guests, occasion) opens WhatsApp with a **pre-filled message** incl. villa name + source/UTM. Floating WhatsApp button + click-to-call on every page.
- **CMS / admin:** client team must add/edit villas, photos, prices, amenities and FAQs **without a developer**.
- Villa filters, photo gallery with lightbox, embedded Google Map (approximate location), Google reviews widget or manual review section.
- Owner-partner form → email + Google Sheet. Instagram feed/link block. Optional “Coming soon” state for villas not yet live.

5. Tracking, marketing & SEO

- Install **GA4, Meta Pixel + Conversions API, Google Tag Manager, Search Console**. Track events: WhatsApp click, form submit, call click, villa view.
- UTM capture so every WhatsApp enquiry shows its source (Meta / Google / Instagram / direct).
- One reusable **ad landing-page template** (single villa or occasion, no menu distractions).
- On-page SEO for searches like “villa near Indore”, “farmhouse in Indore for party”, “Jaam Gate stay”; LodgingBusiness schema, clean per-villa URLs, alt text, XML sitemap.

6. Technical requirements

- Mobile-first and fully responsive; Google PageSpeed (mobile) **85+**; images compressed (WebP) and lazy-loaded.

- Platform: WordPress (Elementor/Bricks) or Webflow — designer to recommend with reasons. SSL, reliable hosting, daily backups, basic security.
- Domain, hosting, CMS and all third-party accounts registered in **client's name**; full admin access handed over at launch.
- Build so **Phase 2** can be added later: availability calendar, online booking + Razorpay payments, owner dashboard (quote separately, not in scope now).

7. Content — who provides what

Client provides	Designer provides
Villa photos (pro shoot), villa details, prices, policies, logo inputs, draft copy, WhatsApp number	Logo refinement, UI design, copy polishing & formatting, icons, image optimisation, SEO meta titles/descriptions, stock images for placeholders only

8. Deliverables & timeline (indicative)

Phase	Deliverable	Timeline
1. Design	Figma designs: Home + Villa detail (desktop & mobile) — 2 revision rounds	Week 1-2
2. Build	All pages developed on CMS, tracking installed, forms tested	Week 3-4
3. Launch	QA on mobile/desktop, speed check, go-live, Search Console submission	Week 5
4. Handover	Admin training (1 session), short how-to doc / video, all logins	At launch
5. Support	30 days of bug fixes after launch; AMC quoted separately	Post-launch

9. Please include in your proposal

- 3-5 relevant portfolio links (hospitality / travel / premium brands preferred).
- Recommended platform + reasons; total cost with breakdown (design, development, SEO set-up, logo).
- Yearly costs: hosting, domain, plugins/licences, and maintenance (AMC).
- Timeline, number of revisions included, and who will be the single point of contact.

10. Acceptance criteria

- All pages live and responsive on Android, iPhone and desktop; PageSpeed mobile 85+.
- WhatsApp enquiry opens with correct pre-filled details from every villa and form; all tracking events visible in GA4 & Meta Events Manager.
- Client team can add a new villa end-to-end from the CMS without help.
